

DAIRY Screening and Eradication Programme

Eradication Step 1 – Screen the breeding herd for virus

Short cut: Milking herd: [BTM PCR](#) may be used as an initial screen

Identify any PI animals and remove

Young stock: [pooled RT-PCR on serum](#) may be used as an initial screen but will not give information on exposure status

 Fail

 Pass

Eradication Step 2 – Screen calves. Lower screening age to be determined by limit of test used. [Options](#)

Continue for 12m after last PI removed **OR** completion of Step 1 if no PIs identified

Eradication Step 3 – Check test each heifer group as they reach 9m

Eradication step 4 - Check test 12 months after passing step 3
